WORK EXPERIENCE

TheTravelHunters

Lead, Frontend Engineer

Remote

Jun 2025 - Present

- Built data and ops platforms driving cross-team decisions. Led development of a Search & Analytics Dashboard used by 4 teams – management, sales, marketing, support – surfacing hotel and destination trends across configurable time ranges. Also rebuilt the Admin Booking Management UI and Hotel Reservation Management portal, giving properties self-serve control over availability. Cut manual confirmation calls by 62% and reduced support ticket volume by 35%, while improving booking response time from 4 min to 45 secs.
- Expanded revenue potential by unifying booking flows and launching new products: Engineered a multi-product bundle checkout for hotels, taxis, and tours, replacing the legacy single-product system. Built the taxi frontend end-to-end with real-time availability, dynamic pricing, and pickup/drop-off selection, fully integrated into the hotel pipeline. Drove a 28% increase in average order value and unlocked 1.2M+ in annualized revenue from new bundles and bookings within 6 months.
- Scaled frontend performance and visibility with modern data fetching and analytics: Eliminated cascading network waterfalls by refactoring client-side fetching to server-initiated streaming with Suspense, cutting time-to-first-byte perceived load by 41%. Boosted marketing landing page Page Speed Index by 32 points by offloading Clarity, GTM, and Meta Pixel to Partytown Web Workers. Shipped a custom session-tracking system with a live super-admin dashboard, enabling real-time visibility into user flow, traffic sources, and drop-off rates for 50k+ monthly sessions.

CVSpan

Frontend Developer

Remote

Jan 2025 - Jun 2025

- *Improved product performance and user experience.* Developed and maintained core SaaS features using React.js, Redux Toolkit, and TypeScript. Implemented code splitting and lazy loading to reduce average page load times by 15% and increase user satisfaction scores by 10%.
- *Drove scalable frontend architecture and code quality.* Collaborated with product managers, UX designers, and backend engineers to architect and ship scalable frontend features. Led code reviews and enforced quality standards, cutting bug escape rate by 40% and reducing average PR review time from 2 days to 6 hours.
- *Enabled consistent delivery in fast-paced Agile teams.* Actively participated in sprint planning, stand-ups, and retrospectives to align priorities and unblock delivery. Helped maintain a 98% sprint completion rate and supported rapid iteration, shipping 12+ high-impact features per quarter.

Hotels.ng

Frontend Developer

Remote

Sep 2024 - Dec 2024

- **Telex.im (Slack-alternative team collaboration platform):** Engineered the real-time messaging UI in React.js and TypeScript — threading, channel switching, presence, typing/read receipts, file sharing, and direct messages. Integrated WebSocket transport via Centrifugo with optimistic updates, message reconciliation, and connection-aware retry, achieving sub-200ms perceived delivery and supporting 1,000+ concurrent users per workspace without dropped messages.
- **Built a live system-monitoring dashboard inside Telex for developer teams:** Streamed database, server, and application telemetry over WebSocket push with time-bucketed downsampling for high-frequency charts, and wired webhook-driven alert flows that route anomalies directly into team channels. Cut average incident response time by ~5 minutes and gave developers a single surface for monitoring, alerts, and discussion.
- **Established the frontend foundation for a fast-moving cross-functional squad:** Shipped the shared component library (Tailwind + Radix), routing layer, Zustand + TanStack Query state architecture, and end-to-end TypeScript types shared with the backend — eliminating whole classes of runtime errors, standardizing real-time hooks (WebSocket subscriptions, toast/notification primitives), and reducing average PR review friction across the team.
- **Lumbo (Real-time Multiplayer Game):** Co-designed and built the full game interface in React.js and Zustand; engineered WebSocket integration via Centrifugo to support 1,000+ concurrent players with low-latency game-state sync, and enforced end-to-end TypeScript type safety between client and server, eliminating runtime errors during rapid iteration.

HNG Tech (Hotels.ng Initiative)

Frontend Developer Intern

Remote

Jul 2024 - Aug 2024

- Selected as top-20 finalist from 10,000+ applicants for Resolve voting platform: Spearheaded frontend architecture using Next.js, TypeScript, Zustand, TanStack Query/Table, Socket.io, and Tailwind CSS to build a scalable, real-time online voting system. Achieved 99.9% uptime during peak load testing with 5,000+ simulated concurrent users and <120ms p95 API response time.
- Delivered core authentication and election management flows end-to-end: Built secure email/password and Google OAuth login with NextAuth.js, and shipped the full Election Creation flow with validation and state management. Reduced signup drop-off by 42% and cut election setup time from 15 min to 3 min with streamlined UX and real-time validation.
- Engineered a high-usability elections listings page. Implemented filtering, real-time status tracking, and fully responsive design for desktop and mobile. Improved page load speed by 55% and increased mobile engagement by 30%, ensuring fast navigation and clarity across device types.

EDUCATION

The Bells University of Technology

B.Eng (Hons.) Mechatronics Engineering

Ota, Nigeria

Graduation Date: Jul 2017

PROJECT EXPERIENCE

NoThrow

Author & Maintainer

Remote

Dec 2025 - Dec 2025

- Authored and published an open-source TypeScript library for type-safe error handling inspired by Rust's Result and Option types.
- Provides generator-based error propagation using yield (analogous to Rust's ? operator), making errors explicit at compile time and eliminating nested try/catch blocks.

Velora, AI Email Client

Full-stack Developer

Remote

Mar 2025 - Mar 2025

- Full-stack AI-powered email client on the T3 Stack with AI-assisted email management, full type safety via tRPC, persistent storage through Prisma ORM, and authentication via NextAuth.js.

Callify, Video Conferencing App

Full-stack Developer

Remote

Aug 2024 - Aug 2024

- Real-time video conferencing application with meeting management, live chat, and participant controls built on the Stream Video SDK integrated into a Next.js full-stack architecture.

DevLinks, Developer Link Sharing Platform

Frontend Developer

Remote

Apr 2024 - Apr 2024

- Link-sharing platform for developers to curate professional profiles with drag-and-drop link reordering and a shareable public page.

SKILLS & INTERESTS

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, SolidJS, tRPC

State Management: Zustand, TanStack Query (React Query), Redux Toolkit

Real-time: WebSockets, Socket.io, Centrifugo, Server-Sent Events

Styling & UI: Tailwind CSS, ShadcnUI, Radix UI, Responsive Design

Databases & ORM: PostgreSQL, MongoDB, Prisma ORM, Firebase, Appwrite

Testing: Jest, React Testing Library, Unit & Integration Testing

Tools: Git, GitHub, Vercel, Figma, Postman, VS Code, Chrome DevTools

Practices: Agile / Scrum, Code Review, CI/CD, Performance Optimisation, Cross-functional Collaboration

INTERESTS: Systems Programming with Rust, Frontend Engineering, Formula 1 & Automotive Technology, Technical Writing, AI-powered Products.
